## 1 DESCRIPTION

### 1.1 Purpose

This document specifies the command, control, and configuration details for operating a NEON sensor used for instrumental observations. It includes a detailed discussion of all necessary requirements for operational control parameters, conditions/constraints, set points, and any necessary error handling. All Level 0 Data Products generated by the sensor should be identified. The raw data are compensated by the DAS, but received at HQ for further processing as L0 unfiltered and uncorrected data product until its associated algorithms are applied to produce a QA/QC'd L1 data product in Standard Scientific Units.

### 1.2 Scope

The expectation is that the Apogee Instruments SI-111 Precision Infrared Radiometer (NEON P/N: 0303220001; no firmware required) will be used to make the measurements of soil radiation biological temperature (AD [01]). The reference document for the Apogee Instruments SI-111 Precision Infrared Radiometer is RD [03].

This document specifies the command, control, and configuration that is needed for operating this sensor. It does not provide implementation details, except for cases where these stem directly from the sensor conditions as described here.

### 2.4 Verb Convention

"Shall" is used whenever a statement expresses a convention that is binding. The verbs "should" and "may" express non-mandatory provisions. "Will" is used to express a declaration of purpose on the part of the design activity.

### 3 INTRODUCTION

The sensor configuration and sensor command and control described here are related to the soil radiation biological temperature and associated sensor body temperature data products (AD[02]). A description of how sensor readings shall be converted to soil radiation biological temperature in degrees Celsius is presented in the associated ATBD (AD[05]). Data products are listed in **Table 1**.

**Table 1.** L0 Data Products.

| L0 Data Product                       | NEON  | DOM  | SIT  | DPL  | PRN    | REV  | SPN  | HOR  | VER  | REP |
|---------------------------------------|-------|------|------|------|--------|------|------|------|------|-----|
| Soil Radiation Biological Temperature | NEON. | DXX. | XXX. | DPO. | 00105. | 001. | 001. | 001. | 000. | 001 |
| Sensor Body Temperature               | NEON. | DXX. | XXX. | DPO. | 00105. | 001. | 002. | 001. | 000. | 001 |

## 4 OVERVIEW OF SENSOR CONFIGURATION

The infrared broadband radiation biological temperature data product and sensor body temperature data product shall be unfiltered and uncorrected thermistor and thermopile output in  $\Omega$  and mV, respectively.

**Table 2.** Sensor configuration settings.

| Parameter                                 | Default Setting  |
|---|--|
| Biological temperature: Acquisition rate  | 1 Hz   |
| Sensor body temperature: Acquisition rate | 1 Hz   |
| Data acquired from sensor                 | Biological temperature (mV);<br>Sensor body temperature ( $\Omega$ ) |
| Measurement mode                          | Run  |

## 5 COMMAND AND CONTROL

### 5.1 Error Handling

This sensor provides no error notification.

### 5.2 Sensor <device> Controls Specification

This sensor has no associated devices.
